Applications using Chemflexx 206

The Chemical Company's (TCC) **Chemflexx 206 plasticizer** is a widely used general purpose plasticizer for the manufacture of flexible plastics, especially PVC. It is insoluble in water and exhibits good stability to heat and ultraviolet light, a broad range of compatibility, and excellent resistance to hydrolysis.

Chemflexx 206 plasticizer is used in PVC, polyvinyl acetate, rubbers, cellulose plastics and polyurethane. End applications include PVC flooring, wall coverings, roofing membranes, swimming pool liners, expanded leather, PVC foams, films, sealing and adhesive systems.
