About Chemflexx TOTM

TCC's **Chemflexx TOTM** is a nearly colorless oily liquid, free of foreign materials. It is a primary branched monomeric plasticizer produced for poly vinyl chloride homopolymer and copolymer resins. **Chemflexx TOTM** is recommended for use in end-use areas where extreme low volatility is required.

Chemflexx TOTM is a lasting primary plasticizer with the good points of both polyester and monomer plasticizers. The compound is suitable for PVC, cellulose nitrate, ethyl cellulose and poly methyl methacrylate. With above average electrical properties, it is mainly used in electrical wire and cable for 105°C level applications. Other end uses include sealing gaskets and similar products.
